

Car parks that run smoothly — on their own.

Turnkey parking management for garages, park-and-ride sites and campuses: access control, ANPR, payment, guidance and one central back office — designed, installed and commissioned by one partner.

Ticketless access

Number-plate recognition lets subscribers and visitors in and out — no ticket, no card.

No queues at the gate

Fast entry and exit lanes with every common payment option.

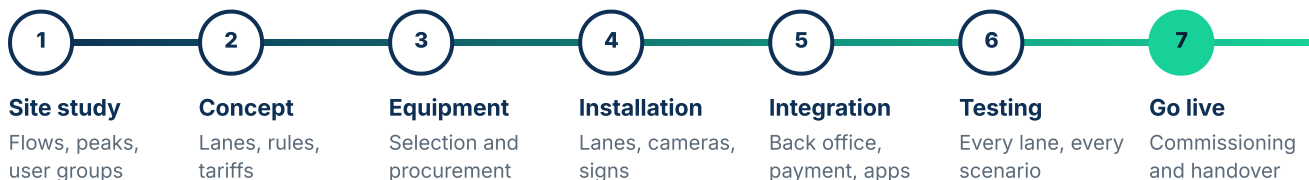

Find a space faster

Bay-level guidance and live counts per level and per zone.

One view of all sites

Occupancy, revenue and alarms for every car park on one screen.

YOUR PROJECT, END TO END

Your visitors should remember the destination, not the car park. We make parking the easy part of the trip.

Seven steps, one team, no gaps between them.

01

Site study

Traffic flows, peak moments, user groups and the condition of existing equipment are analysed on site.

A clear starting point

03

Equipment selection

Barriers, ANPR cameras, pay stations, intercoms and guidance sensors and signs, chosen for the site.

One bill of materials, one supplier to talk to

05

Integration

Back office, payment providers, subscriptions, reservations, city guidance signs and accounting are connected.

Every system talking to each other

07

Commissioning & handover

We switch over, support the first days on site, train your staff and hand over the documentation.

A working car park and a team that can run it

02

Concept

Lane layout, access rules, tariffs, subscriptions and guidance are designed around your users.

A car park designed for its real use

04

Installation

Lanes, cabling, network and signs are installed while the car park stays open wherever possible.

Minimal downtime for your users

06

Testing

Every lane and scenario is tested: subscribers, visitors, lost tickets, blacklist, power failure.

Documented acceptance tests

+

After go-live

Reporting, tariff changes, new sites and upgrades — with the team that built it.

Same partner, same knowledge

What we supply and install

- Barriers and lane equipment
- Pay stations and contactless payment
- Bay guidance and level counting
- Subscriptions and reservations
- ANPR cameras
- Intercom and remote assistance
- Variable message signs
- Central back office

The exact scope is agreed per project — from a single site to a complete network.

Typical applications

- Public car parks
- Park-and-ride sites
- Hospitals and campuses
- Office and residential car parks
- Event and stadium parking

Modernising a car park — or a whole portfolio?

Tell us about your sites. We come back with an approach, a planning and a fixed scope.
