

Every kerbside space, working harder.

Turnkey on-street parking management: from occupancy study and parking policy to sensors, payment, enforcement support and live guidance — delivered and commissioned by one partner.

Less search traffic

Drivers are guided to a free space instead of circling the block.

Fair use of space

Short stays, residents and deliveries managed with clear rules and real data.

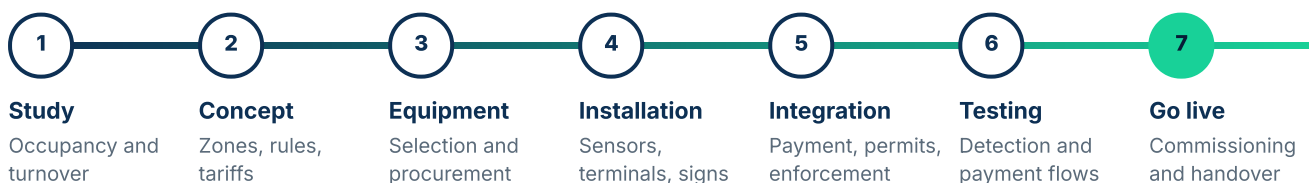

Easy payment

App, terminal or card — whatever suits your users and your city.

Decisions on data

Live and historical occupancy to shape tariffs, zones and policy.

YOUR PROJECT, END TO END

You set the parking policy. We make it work on the street — and show you, with data, whether it does.

Seven steps, one team, no gaps between them.

01

Parking study

We measure occupancy, parking duration and turnover per street and per hour, and map where the pressure really is.

A factual picture of today's kerbside

03

Equipment selection

Sensors, pay terminals, guidance signs, enforcement tools and back office — chosen for your streets and your budget.

One coherent system, one supplier to talk to

05

Integration

Mobile-payment providers, resident permits, enforcement and open data are connected to one back office.

Every channel feeding the same data

07

Commissioning & handover

We go live, train your operators and enforcement staff and hand over full documentation.

A working system and a team that can run it

02

Concept & zoning

Zones, user groups, tariffs, time limits and signage are designed around your mobility goals.

A policy that can be explained and enforced

04

Installation

Sensors, terminals, signs and markings installed street by street, with minimal disruption for residents and shops.

Planned around the street, not the other way round

06

Testing

Detection accuracy, payment flows and enforcement scenarios are tested end to end before launch.

Documented acceptance tests

+

After go-live

Monthly reporting, tuning of tariffs and zones, and extensions to new areas — with the team that built it.

Same partner, same knowledge

What we supply and install

- Occupancy sensors per space
- Mobile-payment integration
- Permit and exemption management
- Back office and dashboards
- Pay terminals
- Dynamic guidance signs
- Enforcement support
- Signage and road markings

The exact scope is agreed per project — from a single site to a complete network.

Typical applications

- City centres and shopping streets
- Residential permit zones
- Loading and delivery bays
- Short-stay and disabled bays
- EV charging bays

Want to know how your kerbside is really used?

We start by measuring today's occupancy and come back with a concrete plan, a planning and a fixed scope.
